

SYSTEMS AND METHODS FOR PROVIDING VARIABLE MEDICAL INFORMATION

ABSTRACT OF THE DISCLOSURE

Systems and methods for providing variable medical information. In some
5 cases, the systems include elements operable to receive information from a number of
implantable medical devices and to provide a common format information set. Thus, in one
exemplary case, two types of encoded binary information is received from different
implantable medical devices. This information can be converted to a desired format, and
assembled into a common medical information database.
